

"It's a Game Changer – Thank You!"

"We love the Shoreland interactive malaria maps. I have spent hours and hours and hours over the last decade trying to determine prevention needs for all kinds of obscure destinations – small islands, remote villages – even just a campsite with a longitude and latitude."

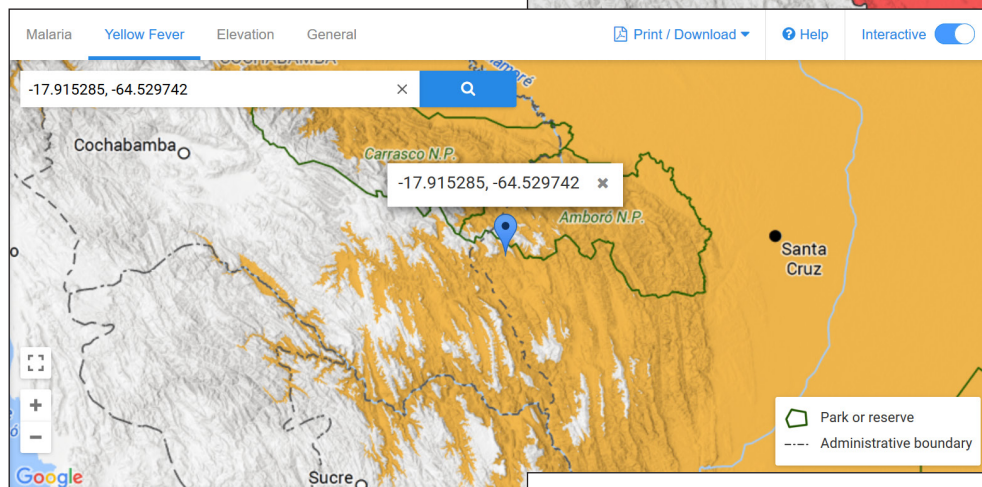

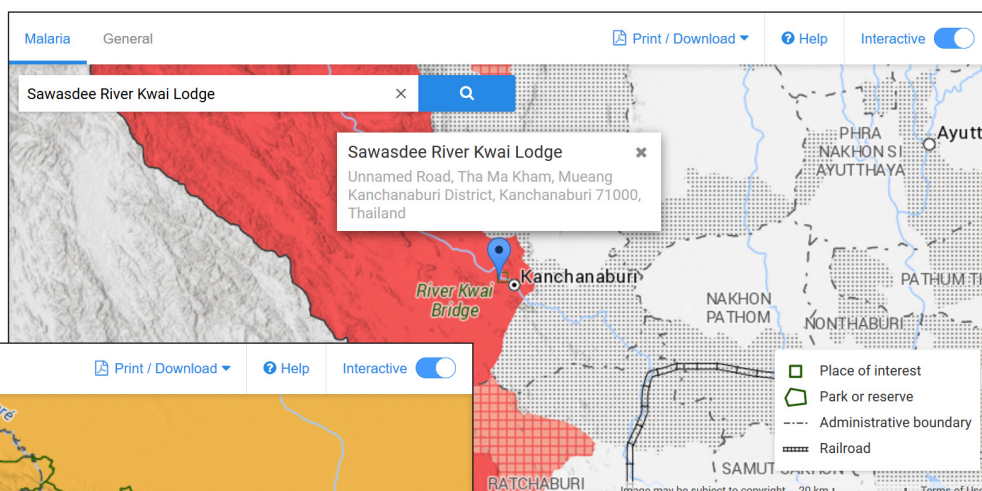

"This new feature has saved me an enormous amount of time. It's really a remarkable improvement."

Use Travax with Google Maps integration and ditch the ruler and compass.

Malaria→

Shoreland's dedicated malaria research team and GIS specialists constantly monitor and evaluate global malaria data to produce the most detailed independently researched malaria prevention maps available from any source.

← **Yellow Fever**

Our yellow fever recommendation maps mirror those of WHO which are a result of a 3-year collaborative WHO-CDC project that included detailed data analysis by a large international panel of YF experts.

Elevation→

Elevation maps are available for countries with territory above 2,800 meters (9,200 feet). Search results display the location's elevation.
